

Mike Miller, Chairman and C.E.O.

Founded in 1956 by K.J. "Smokey" Miller, Safety Boss has grown from a single fire truck operating in Alberta to one of the world's elite companies for blowout control and hydrocarbon firefighting.

The reasons for our success are simple. We have more equipment, more seasoned firefighting veterans and more technology behind our name than any other company in the country.

Spearheaded by Mike Miller, Safety Boss has seen tours of duty throughout North America, Southeast Asia and the Middle East. But it is perhaps our accomplishments in Kuwait after the 1991 Gulf War that we are best known for. With the desert oilfields still ablaze, Mike and his team capped 180 wild wells in just 200 days - a performance that is unlikely to ever be matched. A performance that not only outgunned such industry legends as Red Adair and Boots & Coots, but earned Mike the Order of Canada and Star of Kuwait as well.

Over the years, Safety Boss has controlled hundreds of wild wells, pipeline ruptures and oilfield emergencies using innovative equipment, that in many cases, they had designed themselves including the use of ultra high-pressure water jet cutting, and hot tapping & freezing.

Today, Safety Boss services go far beyond capping wild wells. Our expertise extends to loss management, due diligence assessments, training and special services for downstream companies involved in transporting, processing and refining hydrocarbons.

Safety Boss is proud to hold a Certificate of Recognition (COR) in the Partnerships Program.

"We have no desire to be the biggest - just the best" Mike Miller,

Well Control and Firefighting

Blowout Control

Safety Boss' expertise in blowout control is legendary. Honed over four decades of work in Canada and around the world, the company's blowout control skills continue to be unmatched as we employ the best technology, equipment and people to safely meet the demands of each emergency.

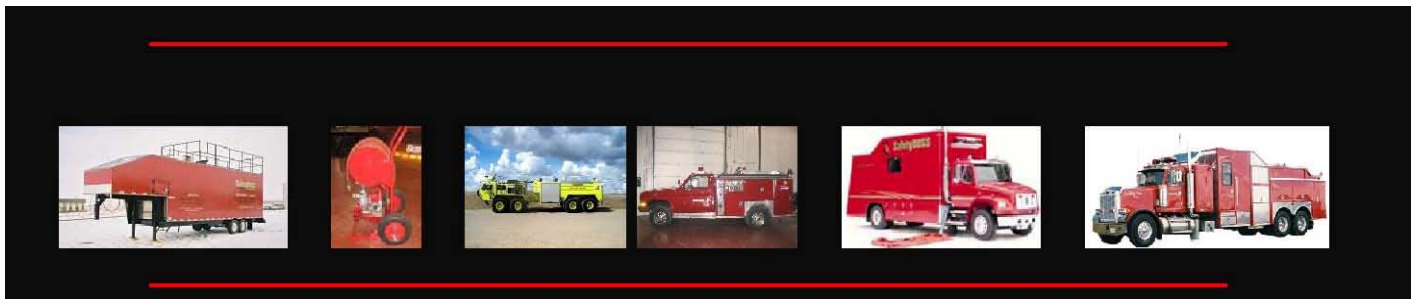

We provide the oil and gas industry with emergency response services for production facility fires and fire protection during high hazard operations. The company is also experienced in working in hydrogen sulfide environments.

Firefighting

Safety Boss specializes in providing a wide range of firefighting services. The company's core expertise is in controlling large hydrocarbon fires. Our experience includes the successful control of hundreds of oil well fires and blowouts, pipeline ruptures and processing facility

Equipment and Capabilities

The Safety Boss fleet of equipment is unmatched in Canada in terms of size and capabilities. Our fleet includes "Smokey" series Fire trucks, H2S Safety Trailers, along with specialized equipment including Ultra-High Pressure Jet-Edge Cutting Units, Hot Tap and Freeze and Porta-Lathe Systems.

The reasons for our success are simple. We have more equipment, more seasoned firefighting veterans and more technology behind our name than any other company in the country.

WELL INTERVENTION

Ultra-High Pressure Jet-Edge Cutting Units

Safety Boss is a recognized leader in water jet cleaning and cutting. Our Jet-Edge equipment works on virtually any material including reinforced concrete and plate steel and has been used worldwide to handle numerous cleaning and cutting challenges. This equipment was utilized by our teams in extinguishing raging oil fires in Kuwait after the Gulf War, safely cutting off damaged wellheads to allow for the installation of blowout preventers.

Porta-Lathe System

The Safety Boss Porta-Lathe system is particularly effective when hydrocarbons are present since it operates without heat or flame. The equipment is able to cut pipe from 3" to 13" and pipe ends can be beveled to allow for a fast fit up for welding. The complete package including an air compressor can be quickly mobilized to any location.

Hot Tap Operations

Safety Boss Hot Tap Operations include various sizes for drilling, completions, pipeline and production operations. Hot Tapping is particularly useful when tapping into a pipeline that is in use and under pressure and enables repairs to be made with little disruption.

Freeze Operations

Safety Boss also provides a freeze service to meet well control, gas plant and pipeline needs.

TRAINING FIRE-RESCUE-SAFETY

The Safety Boss Training Advantage

Safety Boss brings the same level of experience and expertise to our training services as we do our blowout control and emergency services capabilities. We offer industry recognized, competency based, certified courses in a number of disciplines.

- Confined Space Safety and Rescue • First Aid & CPR
- Industrial Fire Response • Hydrogen Sulfide Safety (H₂S) and Dangerous Gases
- Technical Rope Rescue • Transportation of Dangerous Goods (TDG)
- Fall Protection Safety • Workplace Hazardous Materials Information System (WHMIS)

H₂S SAFETY

H₂S SAFETY TRAILERS

Safety Boss H₂S Safety trailers offer protection in an eight cylinder cascade system. The units are completely transportable to remote locations. Our Breathing-Air / Wellsite Office Trailers bring the convenience of an on-site office and the protection of a fully equipped breathing-air trailer right to your location. Each tandem axle trailer is designed and built to withstand the rigors of the industry and provide a comfortable, temperature-controlled workspace.

Safety Boss skid mounted H₂S units have been designed to meet several contingencies within the oil industry. The units feature lifting eyes for transport by conventional methods such as pickup or trailer but also extend to air transport via helicopter. The compact, lightweight design provides cost effective breathing-air protection for scaled down or reduced manpower situations.

SHOWER DECONTAMINATION

Safety Boss provides shower decontamination units for use in acid stimulation and hazardous material recovery situations. All decontamination units have the ability to recover all gray water thereby decreasing the hazardous effect on the environment. The units are designed according to strict A.N.S.I. Standards.

HEALTH, SAFETY and ENVIRONMENTAL LOSS MANAGEMENT

• LOSS MANAGEMENT	• HAZARD ASSESSMENT INSPECTION

Our Mission

We are committed to
Providing the highest
quality of professional
services in Fire, Safety,
Rescue and Training
with the utmost regard
to health, safety, quality
assurance and to the
environment.

We will fulfill every
commitment to our
customers by working
towards our mutual goals
with integrity, respect,
trust, diligence and
continuous improvement.
