## REDUCE THE RISK

There is much to learn about the novel coronavirus that causes coronavirus disease 2019 (COVID-19). Based on what is currently known about the virus, spread from person-to-person happens frequently among close contacts (within about 6 feet). This type of transmission occurs via respiratory droplets. Transmission of novel coronavirus to persons from surfaces contaminated with the virus is also possible, a process called fomites. Current evidence suggests that novel coronavirus may remain viable for hours to days on surfaces made from a variety of materials. Cleaning of visibly dirty surfaces followed by disinfection is a best practice measure for prevention of transmitting COVID-19 and other viral respiratory illnesses within the workplace.

The priority now is to ensure a SAFE working environment for the workforce, so that our businesses can continue to operate.

To do our part to ensure a SAFE working environment for our customers, SafetyBoss has developed a COVID-19 WORKSAFE Service.
