Letter of Reference

December 16, 2014

To whom it may concern:

Safety is a key focus of any project or routine daily tasks, I have had the opportunity to work closely with Safety Boss over the last two years on large facility maintenance turnaround projects as well as smaller routine jobs and they have exceeded expectations every time.

I first had the opportunity to work with Safety Boss during a May 2013 facility maintenance turnaround at the Hythe Brainard Sour Gas Plant. This project saw more than one thousand workers on site with approximately eighty thousand man-hours worked in a sixteen day period without a lost time incident. The project included high risk tasks such high angle work, eighty confined space entries and critical lifts. The Safety Boss team was involved right from the planning phase and delivered efficient well trained and professional staff. Without the services of Safety Boss this project would not have been completed on time or on budget.

Most recently I had the opportunity to work with Safety Boss again during the June 2014 Steeprock Gas Plant maintenance turnaround. Once again Safety Boss was involved from the planning phase through completion of the project. This project saw approximately five hundred personnel on site with sixty five thousand man-hours completed without a lost time incident. This project also included critical lifts, confined space entries and high angle work. Safety Boss once again delivered a professional and efficient team and top notch equipment. The ability of the day and night shift leads to understand the project schedule and manage personnel greatly facilitated another successful project.

I would recommend working with Neil and his Safety Boss team for anyone who is undertaking any project.

Regards,

David Larson
